

How to Use Guide

Pelle Leather Revitaliser

Care for Aniline Leather Surfaces

Pellé Leather Revitaliser is a nourishing treatment designed specifically for aniline and unfinished leather. Over time, natural leathers can dry out, lose their richness and become susceptible to premature wear. Leather Revitaliser helps replenish essential oils and waxes, restoring softness, colour depth and character.

Is your Leather Aniline?

Before using Leather Revitaliser, perform this simple test:

Select an inconspicuous area such as behind a cushion.

Lightly dampen your finger.

Press firmly onto the leather for approximately 15 seconds.

Remove your finger and observe the surface.

If the leather darkens:

Your leather is likely aniline or unfinished leather and Leather Revitaliser is suitable.

If there is no colour change:

Your leather is likely protected, coated or semi-aniline leather. Use Pellé Leather Protector & Conditioner instead.

Before you begin

Always test in an inconspicuous area first.

Ensure the leather is clean before treatment.

For best results, clean first with Pellé Leather Cleaner.

Apply using a clean, soft cloth.

Do not apply directly onto the leather.

Usage

Step 1: Clean the Surface

Remove dust and dirt using Pellé Leather Cleaner and allow the leather to dry completely.

Step 2: Apply Revitaliser to Cloth

Apply a small amount of Pellé Leather Revitaliser to a clean, lint-free cloth.

Step 3: Treat One Panel at a Time

Apply evenly using gentle circular motions.

Work across the entire panel, cushion or section rather than treating isolated areas.

Step 4: Allow to Absorb

Allow the leather time to absorb the nourishing oils and waxes.

Some aniline leathers may absorb more product than others depending on age and condition. Some darkness/change of colour will happen until product dries.

Step 5: Buff to Finish

Once dry, gently buff with a clean, dry cloth to restore a rich, natural appearance.

Ongoing Care Tips

Treat every 3–6 months depending on use and environment.

More frequent treatment may be required in warm, dry or sunny conditions.

Clean spills immediately.

Avoid excessive direct sunlight and heat sources.
